

FLY SCREEN WINDOWS

A powder coated aluminium frame is fitted with fibre mesh as standard. Every screen is mitered at each corner and held together with friction fit corner keys. Mesh is held in place with a pliable rubber gasket designed to keep the mesh taught and secure.

How they work

The rigid framed screen can be held against the window with simple turn buttons, or alternatively made to hinge at the side or top.

Suitability

Can be fitted over any UPVC, timber and metal casements. Sometimes it is necessary to use a framed build off to clear the existing handles. Fibre Mesh is fitted as standard, but Stainless Steel mesh can be fitted where appropriate.

This screen is usually fitted on the inside, however because of the durable powder coating, it can be fitted to any external application.

Removal

Release turn buttons and lift off the screen.

Maintenance

The powder coating can be cleaned with a cream cleaner to restore its original condition. All meshes should be cleaned with soapy water to remove grease and dirt.

Stainless Steel mesh can be power washed if desired.

Dusty screens should be vacuumed or brushed clean.

Technical

Standard colors – White and brown 19mm, 30mm or 26mm frames

Fibre Mesh – 18 x 16 weave, Grey

Stainless Steel – 16 x 16 weave, Natural

Guarantee

12 months on all workmanship under normal wear and tear.
