

## MESH CURTAIN DOOR

A flexible fly screen mesh curtain door made up from 200mm wide tough vinyl-coated polyester strips. Each strip is hooked onto a stainless steel top track and hangs down to the floor making removal a simple task.

**How they work**

Each 200mm curtain strip is riveted securely to a stainless steel plate which in turn is hooked onto a Stainless Steel track. The weighted strips are overlapped by 25% and hang down to form a flexible curtain that can be easily passed through, yet fall back into place.

**Suitability**

A cost effective curtain for openings of any width. You can use it where it is not convenient to site a rigid screen door.  
Not recommended for door ways used by fork lift traffic.

**Maintenance**

The Stainless Steel track requires no maintenance. To clean strips, remove and immerse in warm soapy water, shake off excess water and re-hang.

**Technical**

Vinyl-coated polyester – 17 x 12 weave, Grey  
Standard sizes up to 200mm wide x 2.1 metre drop.

**Guarantee**

12 months on all workmanship under normal wear and tear.
