

## ROLLER FLY SCREEN DOOR

A powder coated aluminium roller cassette is fitted with fibre mesh as standard. The mesh is retained in side guides and clips hold it in place in the closed position.

### **How they work**

A spring loaded cassette allows the fly screen mesh to roll side to side. Top and bottom guides seal the mesh against the door frame. Magnetic strips secure the screen in the closed position.

### **Suitability**

Can be fitted over any timber and metal door casements but is ideal for UVCP patio doors. This screen is usually fitted on the inside. On double patio or French doors two cassettes are used one on each side of the door frame. The screens come together in the middle on a magnetic strip. One of the screen doors can be locked to allow easy access.

### **Maintenance**

The powder coating can be cleaned with a cream cleaner to restore its original condition. All meshes should be cleaned with soapy water to remove grease and dirt. Dusty screens should be vacuumed or brushed clean.

### **Technical**

Standard colors – White and brown  
Fibre Mesh – 18 x 16 weave, grey / charcoal

### **Guarantee**

12 months on all workmanship under normal wear and tear.
