

## ROLLER FLY SCREEN WINDOWS

A powder coated aluminium roller cassette is fitted with fibre mesh as standard. The mesh is retained in side guides and clips hold it in place in the closed position.

<b>How they work</b>	A spring loaded cassette allows the fly screen mesh to roll up and down. Side guides seal the mesh against the window frame. Clips secure the screen in the closed position.
<b>Suitability</b>	Can be fitted over any timber and metal casements but is ideal for UVCP windows. This screen is usually fitted on the inside.
<b>Removal</b>	Can be installed using hook and loop fastener.
<b>Maintenance</b>	The powder coating can be cleaned with a cream cleaner to restore its original condition. All meshes should be cleaned with soapy water to remove grease and dirt. Dusty screens should be vacuumed or brushed clean.
<b>Technical</b>	Standard colors – White and brown Fibre Mesh – 18 x 16 weave, Grey
<b>Guarantee</b>	12 months on all workmanship under normal wear and tear.
